

Which companies have made advances in battery recycling technology in 2024?

Several companies made advances in battery recycling technology in 2024. Altilium has developed a hydrometallurgical recycling technology that achieved over 97% lithium recovery from LFP batteries. The company has demonstrated its ability to recycle both LFP and NMC batteries.

What is EIC's 2024 Tech Report?

The European Innovation Council (EIC) has released its 2024 Tech Report, highlighting 34 emerging technologies and breakthrough innovations that could shape the industries of tomorrow.

What's new in telecommunications in 2024?

The latest in telecommunications, as covered by IEEE Spectrum in 2024, includes China's Qianfan satellite constellation, 6G terahertz signals, and Qualcomm's AI-enhanced Wi-Fi chip, with European telecoms phasing out Huawei and ZTE, and advancements in quantum cryptography and long-distance low-power Wi-Fi.

Which EV battery company has made significant progress in 2024?

Contemporary Amperex Technology Co. Limited (CATL), the world's largest EV battery maker, made significant progress in solid-state batteries in 2024. The company has entered trial production of 20 amp-hour (Ah) solid-state cells, achieving an energy density of 500 Wh/kg--a 40% improvement over existing lithium-ion batteries.

Where do batteries come from in 2023?

That includes utility-scale projects as well as projects installed "behind the meter," meaning they're somewhere like a home or business and don't interact with the grid. Over half the additions in 2023 were in China, which has been the leading market in batteries for energy storage for the past two years.

What impacted the ICT industry in 2024?

In 2024, the ICT industry faced a series of unanticipated disruptions, highlighting vulnerabilities in infrastructure, security, and policy. The CrowdStrike-Microsoft outage exposed the overreliance on cloud services, emphasizing the critical need for robust cybersecurity frameworks.

STAFFORD, Texas--(BUSINESS WIRE)--Jan. 9, 2025-- Microvast Holdings, Inc. (NASDAQ: MVST) ("Microvast" or the "Company"), a global leader in advanced battery technologies, today announced a significant milestone in the development of its True All-Solid-State Battery (ASSB) technology. This advancement represents a key step forward in ...

A research team has developed a strategy to enhance the durability of lithium-rich layered oxide (LLO)

material, a next-generation cathode material for lithium-ion batteries (LIBs). This breakthrough, which significantly ...

A look at the 2024 Battery Roadmaps and perhaps the direction that the battery and application industry are moving towards. The data has been taken from the last half of 2023 and the first quarter of 2024. ... Zinc Ion ...

In the 2024-2025 Budget, the Australian Government announced it will invest \$523.2 million in the new Battery Breakthrough Initiative (the Program) to transform Australia's battery industry by promoting the development of battery manufacturing capabilities and helping manufacturers move up the battery value chain.

A broad array of companies are competing to become the pioneers of the battery technology used in electric vehicles and energy storage.

Key Highlights From Quarter 1/2024. Harvard Researchers" Breakthrough: Significant advancements in solid-state battery technology with the development of novel electrolyte formulations by Harvard researchers, promising quick ...

This is a key advantage of the new technology, as the IEA has estimated that the world could face a shortage of the material as soon as 2025. Microsoft also believes that the discovery is a major breakthrough for AI, as ...

Checking the Electric Vehicle Battery Forecast Today, Tomorrow, and the Far Future: Mostly Sunny. A look at the chemistries, pack strategies, and battery types that will power the EVs of the near ...

A look at the 2024 Battery Roadmaps and perhaps the direction that the battery and application industry are moving towards. The data has been taken from the last half of 2023 and the first quarter of 2024.

Imec just announced a major breakthrough in battery technology. With European partners, the company has developed a lithium-metal solid-state battery with an energy density of 1070 watt-hours per liter. The new battery uses a cost-effective manufacturing process that is compatible with existing lithium-ion production.

Discover how 2024's transformative technologies are shaping the future of a resilient digital world through 5G-Advanced, AI breakthroughs, cybersecurity innovations, and sustainable connectivity solutions.

Electric and hybrid vehicles have gained significant popularity in recent years as environmentally friendly and renewable means of transportation [1]. This is due to the fact that it offers an alternative to internal combustion engines (ICEs), which are regarded as sources of environmental pollution [2], [3], [4]. As one of the major sources of pollution transmitted to ...

Most of the increased runtime challenge falls on outside plant (OSP) sites, where battery backup solutions

must be tailored to the specific space, weight, and environmental conditions of the site. One of the key advances in lead-acid ...

The year 2024 could herald a pivotal juncture for palladium and platinum, given recent strides in integrating these metals into a novel lightweight battery technology for electric vehicles. In a recent operational update, mining company Platinum Group Metals, in collaboration with Anglo American Platinum, signaled its intent to forge prototypes with an eye towards ...

Founded at the Massachusetts Institute of Technology in 1899, MIT Technology Review is a world-renowned, independent media company whose insight, ...

With continuous development in 5G infrastructure, 2024 will unfold a series of breakthrough innovations to redefine telecommunication. From the rollout of the 5G extended version to cyber resilience and sustainable green telecom ...
