

What are the technical specifications of lead-acid batteries?

This article describes the technical specifications parameters of lead-acid batteries. This article uses the Eastman Tall Tubular Conventional Battery (lead-acid) specifications as an example. Battery Specified Capacity Test @ 27 °C and 10.5V The most important aspect of a battery is its C-rating.

How tall can a group 24 Battery be?

Batteries from Group 24 (8 7/8 inch height) can usually be accommodated in battery compartments regardless of height differences, and in most cases they're even able to accommodate batteries from Group 24T (9 3/4 inch height) which are 7/8 inch taller than Group 24 batteries.

How big is a group 31 Battery?

Group 31 batteries are categorized primarily by their size, not by their power, even though power affects energy production. The dimensions of Group 31 batteries are 13 inches long, 6 13/18 inches wide, and 9 7/16 inches tall. Group 31 batteries are larger than Group 29NF batteries, as well as being shorter and wider than Group 29H batteries.

What are group 29 and group 31 batteries?

You have a few options when looking for the right battery for your car or truck. Group 29 and group 31 batteries are designed for automotive applications. But there are some key differences between them that you need to be aware of before making a purchase. But what exactly are these groups?

What is a BCI battery group size?

A BCI battery group size is a type of designation system universal in nature, used throughout the industry for categorizing lead-acid batteries based on physical dimensions, terminal configurations, and other design characteristics.

What do Ah numbers mean in a battery case?

These numbers define the physical dimensions of the battery case. This is important as some applications call for specific case sizes. While the BCI does not determine the Amp Hours (AH) rating for the batteries, there is a correlation between case size and AH rating.
