The lead-acid battery, invented by Gaston Planté in 1859, is the first rechargeable battery. It generates energy through chemical reactions between lead and sulfuric acid. Despite its lower energy density compared to newer batteries, it remains popular for automotive and backup power due to its reliability. Charging methods for lead acid batteries include constant current

In today's world, where sustainability and environmental protection are increasingly important, recycling lead-acid batteries has become a critical practice. Widely used across various industries and in motor vehicles, these batteries pose significant environmental challenges due to the toxic substances they contain. Learning how and where to sell used lead-acid batteries is a vital step ...
