

How to reduce charging cost for users and charging piles?

Based Eq. ,to reduce the charging cost for users and charging piles,an effective charging and discharging load scheduling strategyis implemented by setting the charging and discharging power range for energy storage charging piles during different time periods based on peak and off-peak electricity prices in a certain region.

How effective is the energy storage charging pile?

The energy storage charging pile achieved energy storage benefits through charging during off-peak periods and discharging during peak periods,with benefits ranging from 699.94 to 2284.23 yuan(see Table 6),which verifies the effectiveness of the method described in this paper.

How does a charging pile reduce peak-to-Valley ratio?

The proposed method reduces the peak-to-valley ratio of typical loads by 52.8 % compared to the original algorithm, effectively allocates charging piles to store electric power resources during off-peak periods, reduces user charging costs by 16.83 %-26.3 %, and increases Charging pile revenue.

How to solve energy storage charging and discharging plan?

Based on the flat power load curve in residential areas,the storage charging and discharging plan of energy storage charging piles is solved through the Harris hawk optimization algorithmbased on multi-strategy improvement.

How does optimization scheduling work for energy storage charging piles?

a. Based on the charging parameters provided above and guided by time-of-use electricity pricing,the optimization scheduling system for energy storage charging piles calculated the typical daily load curve changesfor a certain neighborhood after applying the ordered charging and discharging optimization scheduling method proposed in this study.

How long does it take to charge a charging pile?

In the charging and discharging process of the charging piles in the community, due to the inability to precisely control the charging time periods for users and charging piles, this paper divides a day into 48 time slots, with the control system utilizing a minimum charging and discharging control time of 30 min.
