

Istria, the biggest peninsula in the Adriatic, will draft a study on the potential for the construction of offshore wind farms, with the aim to achieve energy independence. An analysis of the possibilities for the construction of ...

The Balkan Peninsula is a geographical region under various large-scale climatic influences, one of the most significant being the Mediterranean Sea in the southwest and ...

An optimal charging strategy for borehole thermal storage by harvesting energy from photovoltaic (PV) generation in a low-carbon space heating system is proposed and can benefit ...

How Solar & Storage Will Drive the Balkan Green Energy Transition Some Balkan countries are already bullish on storage, as demonstrated by the Croatian government's EUR500 million ...

V2B and V2G power solutions can complement solar photovoltaic (PV) arrays and other distributed energy resources (DERs), or supplement diesel generators as backup power. In ...

The idea of Croatia as one of Europe's last hidden destinations has long passed its use-by date. This splendid segment of the Balkan Peninsula has developed ...

At Peninsula Precision Electrics, we're on a mission to save the world, one solar panel at a time. ... Our dedication to solar energy isn't just about saving money on electricity bills--it's about making a positive impact on the environment. With every installation, we're helping to combat climate change and preserve our planet for future ...

Western Balkan countries, however, have so far not chosen to follow Germany's lead in relying on natural gas as a key transition fuel to a renewable-energy future. As the table indicates, Kosovo, a potential EU ...

Balkan Peninsula. Also referred to as the Balkans, the Balkan Peninsula is a geographical and cultural region in the southeastern part of Europe. The region is named ...

Most of the solar energy in the WB6 countries is comprised of small size farms or group of solar panels, there are no large solar power facilities. By 2016 total solar power installed capacity was 42.4 MW. The countries with the most installed solar capacity was Macedonia 17 MW, Bosnia and Herzegovina with 14 MW, Serbia with 10.8 MW and Kosovo ...

International Energy Agency started discussion on the energy and water dependence in 2012 in a chapter

Balkan Peninsula high-precision energy storage box

"Water for Energy: Is energy becoming a thirstier resource?" from the World Energy Outlook 2012 [5]. More thoroughly discussion on the same topic can be found in 2016 World Energy Outlook [6]. US Department of Energy published

The mineral deposits of the Balkan Peninsula and western Turkey are bound to modern fold belts such as the Carpathians, Dinarides, Balkanides, Hellenides, and Pontides separated by large intermountain ...

Balkan Peninsula Region is dependent on energy import, especially the oil and natural gas imports, with the high dependence and use of coal, primily lignite, in power generation. Besides the high carbon density due to the heavy dependence on coal, the excessive use of wood for fuel is a significant environmental concern, as it is the cause of air pollution, ...

Energy storage could be the key component for efficient power systems transition from fossil fuels to renewable sources. The core objective of this paper is to investigate the ...

Fish are important elements of aquatic ecosystems. Their communities naturally follow the river continuum and have been well described in the western European freshwater watersheds. In regions of higher endemism, such as the Balkan ...

Analysis of the water-power nexus of the Balkan Peninsula -- 32% share for renewable energy in gross final energy consumption, and -- 32.5% improvement in energy efficiency.
