

What is a battery capacity calculator?

Battery capacity calculator -- other battery parameters FAQs If you want to convert between amp-hours and watt-hours or find the C-rate of a battery, give this battery capacity calculator a try. It is a handy tool that helps you understand how much energy is stored in the battery that your smartphone or a drone runs on.

How does a battery calculator work?

Based on these inputs, the battery calculator will compute the required battery capacity or life, helping you to select the appropriate battery for your needs, ensuring optimal device performance and avoiding premature battery depletion. Battery Capacity: Represents the storage capacity of the battery, measured in Ampere-hours (Ah).

What is a battery pack calculator?

This battery pack calculator is particularly suited for those who build or repair devices that run on lithium-ion batteries, including DIY and electronics enthusiasts. It has a library of some of the most popular battery cell types, but you can also change the parameters to suit any type of battery.

How do you measure a battery's capacity?

To measure a battery's capacity, use the following methods: Measure the time T it takes to discharge the battery to a certain voltage. Calculate the capacity in amp-hours: $Q = I \times T$. Or: Calculate the capacity in watt-hours: $Q = P \times T$.

How do you calculate a high voltage battery pack?

The required battery pack total energy E_{bp} [Wh] is calculated as the product between the average energy consumption E_{avg} [Wh/km] and vehicle range D_v [km]. For this example we'll design the high voltage battery pack for a vehicle range of 250 km. The following calculations are going to be performed for each cell type.

How to calculate battery pack capacity?

The battery pack capacity C_{bp} [Ah] is calculated as the product between the number of strings N_{sb} [-] and the capacity of the battery cell C_{bc} [Ah]. The total number of cells of the battery pack N_{cb} [-] is calculated as the product between the number of strings N_{sb} [-] and the number of cells in a string N_{cs} [-].
