

What is battery capacity & voltage?

Battery capacity is often measured in Amp-hours (Ah), which indicates how much current a battery can deliver over a specific period. Voltage, on the other hand, represents the electrical potential difference that drives current through a circuit. Together, these two metrics are crucial for evaluating battery performance in various applications.

How does voltage affect battery capacity?

Generally, a battery's capacity is directly proportional to its voltage. As the voltage increases, the capacity also increases, allowing the battery to store more energy. This is why lithium-ion batteries with higher voltage typically offer longer usage times.

## 2. The Relationship Between Voltage and Discharge Curve

What is charge voltage?

**Charge Voltage** - The voltage that the battery is charged to when charged to full capacity. Charging schemes generally consist of a constant current charging until the battery voltage reaches the charge voltage, then constant voltage charging, allowing the charge current to taper until it is very small.

What is battery voltage?

At its most basic, battery voltage is a measure of the electrical potential difference between the two terminals of a battery--the positive terminal and the negative terminal. It's this difference that pushes the flow of electrons through a circuit, enabling the battery to power your devices.

How do you calculate a battery's energy capacity?

A battery's energy capacity can be calculated by multiplying its voltage (V) by its nominal capacity (Ah) and the result will be in Wh/kWh. If you have a 100Ah 12V battery, then the Wh it has can be calculated as  $100\text{Ah} \times 12\text{V} = 1200\text{Wh}$  or 1.2kWh. Note that Watt-hours (Wh) = energy capacity, while ampere-hours (Ah) = charge capacity.

How many amps can a battery provide?

An Amp-hour (Ah) is a unit of electric charge that represents the amount of energy a battery can deliver at a constant current over one hour. For example, a 100Ah battery can theoretically provide 100 amps for one hour or 50 amps for two hours.
