# Business Energy Storage System Product Planning

Can energy storage planning be used in the CES business model?

Also, the existing widely-used method in energy storage planning, that embeds the system frequency response model into the optimization model to deal with inertia shortage demand, is unfeasible to be directly used in the CES business model due to the data confidentiality problem.

#### Are energy storage systems optimal planning and operation under sharing economies?

At present, there are many researches related to the optimal planning and operation of energy storage systems under sharing economies such as CES and SES. In , two kinds of decision-making models for the CES participants were established based on perfect forecasting information and imperfect information, respectively.

#### What is a bi-layer optimal energy storage planning model?

Based on this evaluation results, a bi-layer optimal energy storage planning model for the CES operator is established, where the upper-layer model determines the installed capacity of lithium (Li-ion) battery station and the lower-layer model determines the optimal schedules of the CES system.

#### What are the business models for large energy storage systems?

The business models for large energy storage systems like PHS and CAESare changing. Their role is tradition-ally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day.

Is energy storage a new business opportunity?

With the rise of intermittent renewables, energy storage is needed to maintain balance between demand and supply. With a changing role for storage in the ener-gy system, new business opportunities for energy stor-age will arise and players are preparing to seize these new business opportunities.

#### Are energy storage business models the future?

The lessons from twelve case studies on energy storage business models give a glimpse of the future and show what players can do today. The advent of new energy storage business models will affect all players in the energy value chain. In this publication we offer some recommendations.
