

Can secondary batteries be used in new energy vehicles

How to promote electric vehicle battery secondary use?

To promote electric vehicle battery secondary use, this research studies a two-period battery secondary use closed-loop supply chain model consisting of a battery (re)manufacturer, a secondary user and a government. The government may provide subsidies for the secondary users to incentivize electric vehicle battery secondary use.

Can removed batteries be secondary used before remanufacturing?

However, removed batteries can still be secondary used for other purposes, such as energy storage, before remanufacturing. To promote electric vehicle battery secondary use, this research studies a two-period battery secondary use closed-loop supply chain model consisting of a battery (re)manufacturer, a secondary user and a government.

What is battery second use?

Battery second use substantially reduces primary Li-ion batteries needed for energy storage systems deployment. Battery second use, which extracts additional values from retired electric vehicle batteries through repurposing them in energy storage systems, is promising in reducing the demand for new batteries.

Can electric vehicle batteries be used in energy storage systems?

Volume 253, 15 August 2022, 124159 Potential of electric vehicle batteries second use in energy storage systems is investigated. Future scale of electric vehicles, battery degradation and energy storage demand projections are analyzed. Research framework for Li-ion batteries in electric vehicles and energy storage systems is built.

Can battery second use reduce the demand for new batteries?

Battery second use, which extracts additional values from retired electric vehicle batteries through repurposing them in energy storage systems, is promising in reducing the demand for new batteries. However, the potential scale of battery second use and the consequent battery conservation benefits are largely unexplored.

Do secondary battery users need a high power capacity?

In addition, under government's subsidy regulation, secondary battery users need to determine the quantities of batteries with relatively high power capacity for secondary use. Theoretically, this study enriches the research field of sustainable development of electric vehicle battery industry.
