Can I use a valquest Z-Cap capacitor switch with a cbc8000?

The Valquest Z-Cap capacitor switch can be used with Eaton's CBC8000 to provide Integrated Volt/VAR Control (IVVC). Eaton's revolutionary Edison capacitor switch combined with the Valquest Z-Cap control is available online, as is the Valquest Z-Cap product brochure and Edison capacitor switch information.

Why should a switching device close at a zero voltage difference?

Closing a switching device at the instant of zero voltage difference across the switch reduces switching related transients during operation of overhead capacitor racks. Zero voltage closing is an ideal solution for multi-step applications where inrush current and frequency may impact the scope of the capacitor solution.

What is zero voltage closing (zvc)?

Zero voltage closing (ZVC) with Eaton's Edison capacitor switch Initiating the switching device to close at the instant of zero voltage difference across the switch reduces transients during operation. Zero voltage closing is an ideal solution for multi-step applications where inrush current and frequency may impact on the system.
