

What is a variable capacitor?

Definition: Whenever the capacitance of a capacitor is changed based on the necessity to a certain range of values is known as a variable capacitor. The two plates of this capacitor can be made with metals where one plate is fixed & the other one is movable.

What are the applications of variable capacitors?

There are various applications of these Variable Capacitors. Some of them are listed as follows: In this capacitor, the type called Trimmer Capacitor can be easily used on the 'Printed Circuit Board'. These are preferred in the 'Calibration' of the equipment. These are used in the 'Receivers' of radio. Where the LC circuits are present.

What is a fixed capacitor & a variable capacitor?

The capacitors with the capacitance value are fixed are known as 'Fixed Capacitors'. Similarly, the capacitors that are with varying amounts of capacitance are known as Variable Capacitors. This type of capacitor has the capability of changing the values of its capacitance either "Electrically" or "Mechanically".

How to choose a variable capacitor?

A: There are several factors to consider when choosing a variable capacitor, such as the required capacitance range, voltage rating, quality factor, temperature coefficient, size, shape, packaging, etc. The choice depends on the design specifications and performance requirements of the circuit or device.

What is variable capacitance?

Variable capacitance is sometimes used to convert physical phenomena into electrical signals.

Why are variable capacitors used in filters?

Variable capacitors are widely used in filters because they can be adjusted to provide any desired frequency response. When a filter is created using a fixed capacitor, its cutoff frequency depends on the size of the capacitor, which limits its tuning range. As a result, it is impossible to create perfectly tuned filters with fixed capacitors.

The varactor diode is also referred to as a voltage variable capacitor, or VVC. The diode's name "varactor" is a contraction for "variable reactor." Similarly, "varicap" is a contraction for "variable capacitor." Operation ...
