

Why are China's solar companies undercutting each other?

China's world-dominating solar firms have been forced to sell below cost after a breakneck buildup in capacity to feed China's renewables boom. Companies are undercutting each other to maintain market share, and most are expected to report losses this year, BloombergNEF said in a report earlier this month.

Will China's crowded solar power sector keep global prices low?

Consolidation in China's crowded solar power sector is pushing smaller players out of the market, but excess production capacity - with more on the way - threatens to keep global prices low for years.

Are Chinese solar-panel makers winning?

Chinese solar-panel makers are winning with an unassailable lead: they now account for 80 per cent of global production capacity. But the cost of that victory is now looking too high. China dominates the solar panel sector's entire supply chain. Prices, which are nearly two-thirds lower than US counterparts, have helped it to win market share.

How has China's solar industry changed in 2024?

Within China, the exponential growth of the solar industry has led to a fierce production race, resulting in widespread indebtedness among sector companies. At the same time, price wars between major players are intensifying. According to a sector association, the number of new solar projects fell by more than 75% in the first half of 2024.

Why did China's top solar companies lose in the third quarter?

Photographer: Qilai Shen/Bloomberg (Qilai Shen/Bloomberg) (Bloomberg) -- China's top solar manufacturers posted big losses in the third quarter as severe overcapacity and price wars continue to hurt the companies producing equipment critical to global energy transition.

Are Europe and China winning a battle over the solar industry?

Europe and China's battle over the solar industry has been going on for two decades. Chinese solar-panel makers are winning with an unassailable lead: they now account for 80 per cent of global production capacity. But the cost of that victory is now looking too high. China dominates the solar panel sector's entire supply chain.

But Beijing has also ramped up reliance on coal-fired power plants in recent months to support its ailing economy as the Ukraine war pushes up global energy prices.

Consolidation in China's crowded solar power sector is pushing smaller players out of the market, but excess production capacity - with more on the way - threatens to keep global prices low...

After years of turmoil -- marked by overcapacity, plunging prices and declining investor confidence -- China's solar sector is showing faint but discernible signs of recovery.
