How do I convert my old cordless tools to Lithium Power?

Most modern cordless tools use Lithium batteries and I happen to use LiPo battery packs all the time for other projects so I figured I'd convert my old cordless tools to Lithium power using inexpensive LiPo battery packs. This is a really simple conversion and the cost is a fraction of what power tool manufacturer replacement batteries cost.

How does a NiMH battery converter work?

The conversion is achieved by an external AC to DC power supply simultaneously powering and trickle charging an internal NiMH Battery. The NiMH battery produces 1.0 to 1.3V, which is sufficient to power devices requiring 1.5V. In the case of a power loss, the converter will act as a power back up and immediately switch to the NiMH battery.

How do I use a 9v battery?

You would connect your DC 9V source to a plug identical to the one coming out of the adapter and plug that into the power jack on the tablet. A small 9V battery is not sufficient. Your best bet would be a lithium battery. It would run fine off 3 18650 cells in series and a 9V switching regulator.

How do you connect a power tool to a battery?

Take a length of 14ga wire, strip the ends of the wire and solder to the battery contacts inside the power tool.

What is a 5V output battery?

Those "5V output" batteries are a 3.6-ish volt lithium-ion battery with a charging circuit and 3.6-to-5V boost-converter. You could cut out some complexity by connecting a 3.6-ish volt battery to your 3.0-ish volt device. Several (all right: two, on reddit) people claim to have done this.

Can a 9v battery run a tablet?

What is important is what comes out of that power supply, i.e., 9V. To run it off a battery, you would not use the AC adapter. You would connect your DC 9V source to a plug identical to the one coming out of the adapter and plug that into the power jack on the tablet. A small 9V battery is not sufficient. Your best bet would be a lithium battery.

Hello, This is one of those dumb questions that I've done everything to avoid asking but I simply don't feel comfortably guessing and feel embarrassed to even ask at this point but I'd like to convert a battery pack that powers a device using 4 AA alkaline batteries but instead switch over to my Lithium Ion 6600mAh (Product ID: 353).

Where can I buy/build a simple regulator with 4 leads. Two I will solder to a USB plug, and the other two

## Convert device battery to new battery image

solder to the thermometer battery terminals. Thanks! Ps. I'm not sure exactly how many amps the power needs to deliver but since a battery lasts a year, it can't be that much. Also if there is a device that works better with 12v input ...
