Delayed alarm for electrical equipment without energy storage

Do alarm thresholds and delay timers reduce false and missed alarms?

Many alarm systems suffer from false and missed alarms that are detrimental to the safety and efficiency of industrial process operations. This paper proposes a method to jointly design alarm thresholds and delay timers to achieve desired ratio values of false and missed alarms to be reduced.

What is a missing alarm?

Missed alarms are the ones that do not occur when x is in the abnormal condition. Missed alarms are synonymous to quasi-false alarms if the high alarm threshold xth is treated as a low-alarm threshold for x in the abnormal condition. A quasi-false alarm variable xa,l is generated as a counterpart of Eq.

How to calculate alarm threshold Xth and delay timer?

For an alarm threshold xth and the parameter n of a delay timer, calculate samples of alarm durations Dh and Dl to yield the sets $\{D h (k)\} k = 1 K h$ and $\{D l (k)\} k = 1 K l$, respectively. 2. Obtain the credible estimates of the FAR f (xth, n) and the MAR m (xth, n) via Bayesian estimation rule. 3.

Do alarm durations depend on process variables?

In particular, none of Eqs. (4)- (15) involve probability distributions of process variables. Even though probability distributions of alarm durations depend on counterparts of process variables, the proposed method estimates cumulative probabilities of alarm durations, so that probability distributions of process variables are not required.

How does a high-alarm threshold affect false alarms?

Thus, as the high-alarm threshold increases, the number of false alarms decreases while the number of missed alarms increases (Rothenberg, 2009). This tradeoff can be reconciled to select an optimized alarm threshold that balances false and missed alarms (Adnan et al., 2013).

Are false and missed alarms a safety risk?

False and missed alarms reduce the functionality, credibility and trustworthiness of an alarm system thus risking the safetyof the process plant (Center for Chemical Process Safety (CCPS), 2011, Takeda et al., 2014, Zeng et al., 2014, Hu et al., 2018).
