Avoid touching the terminals: Avoid touching the terminals of the battery, as this can cause damage to the device.

In my case I did NOT need to use very much force at all to do this, they come out pretty easily. Maybe a little wiggling was needed for a couple. Be mindful there's little thin tabs that hold the chip and battery into the white case. Once the chip is out of the case, the battery can slide right out of the side of one side of the battery holder.
