Heat Detection Systems: ... Battery Energy Storage Systems (BESS) can pose certain hazards, including the risk of off-gas release. Off-gassing occurs when gasses are released from the battery cells due to overheating or other ...

In this paper, we investigate a method to realize fault detection using interval observer for battery energy storage systems containing actuator faults in microgrids. In order to reduce the data communication burden of the battery energy storage system, an improved event triggering mechanism with time-varying threshold is proposed to control the received signal of the ...

This paper presents a study on the problem of burrs on the electrodes of new energy batteries, which are a major factor contributing to battery short-circuits and explosions. During the process of electrode cutting, the use of cutting tools with a notch is likely to cause burrs on the electrode. Therefore, it is essential to accurately detect the notch of the cutting tool.
