#### How do I install a solar inverter?

Choose the Location: Decide where the inverter will be installed. Inverters should ideally be installed in a cool, dry, and well-ventilated area to ensure efficiency and longevity. Proximity to the main distribution panel is also essential for minimizing power loss. Once your planning is complete, the next step is mounting the solar panels.

#### How does a string inverter work?

The string inverter will take the DC energy from your full solar array to a single source and convert it into usable AC for your home. When paired with a GivEnergy battery storage system, you'll also be able to save any excess generation and power your home on solar all day long.

#### How does a solar inverter work?

Apart from the orientation of your solar panels and batteries, your solar panels should directly connect to your charge controller, as this is where voltage is regulated so that your panels can properly charge your batteries. Wires should then run from your charge controller and split into your batteries and into your inverter.

#### How do I choose a solar inverter?

Assess Your Needs: Determine the energy requirements of your home or business. This will help you decide on the size and type of solar inverter needed. Choose the Location: Decide where the inverter will be installed. Inverters should ideally be installed in a cool, dry, and well-ventilated area to ensure efficiency and longevity.

#### How do I connect my inverter to the SolarEdge Monitoring Platform?

If not already ON - Turn ON the AC to the inverter by turning ON the circuit breaker on the main distribution panel and turning on the StorEdge Connection Unit (if applicable). 3. Wait for the inverter to connect to the SolarEdge monitoring platform. This may take up to two minutes.

#### How does the givenergy string inverter work?

SPECIFICATIONS Specifications Convert your solar panel output into usable energy for the home with the GivEnergy string inverter. The string inverter will take the DC energy from your full solar array to a single source and convert it into usable AC for your home.
