

How much power does an EPS battery supply?

This is a manual action and in a power cut, you must pull this switch before any power is supplied from the batteries. You'll also need to be careful about what you turn on when in EPS mode. The EPS can supply up to 5kw of power (approx. 20A in the UK).

What is emergency power system (EPS)?

What is EPS? The Emergency Power System (EPS) is the method of using power from your Solar Batteries to provide electricity to either a socket, a group of circuits or your whole house in the event of a power cut. How you choose to set up your EPS along with the appropriate settings will depend mainly on:

How does EPS work?

Like Level 1 above, but in this case, the EPS output is connected to a single circuit or a group of circuits. This is either through part of an existing consumer unit or a separate consumer unit on its own. This method is automatic, and the power will kick in after a few seconds in the event of a power cut.

How much power does an EPS Inverter Supply?

You'll also need to be careful about what you turn on when in EPS mode. The EPS can supply up to 5kw of power (approx. 20A in the UK). If you draw more than this (say you have the oven on and then switch on the kettle and microwave), the inverter will overload and shut down requiring it to be reset in order to continue working again.

What happens if an inverter is cut - EPS or no EPS?

1) EPS or no EPS, if there is a power cut, the inverter will shut down completely. This is to protect any power line workers that may be working on them. As you can imagine, without this, the power lines could become energised by solar producing homes and that could be an unwelcome shock to someone who will assume the power is off!

Can EPS power go back to the grid?

Well, as there is no path for the EPS power to feed back into the grid (it has its own socket or circuits) there is no risk to people working on the power lines. Thus, there doesn't need to be an external disconnection between the internal system and the grid. When power is restored, the relay will switch back automatically.

During brownouts, blackouts, and other power interruptions, battery cabinets provide emergency DC power to the UPS to safeguard operation of the critical load. The Integrated Battery Cabinet (IBC) systems are housed in single free-standing cabinets. Model IBC-L with a single battery voltage range is available to meet application runtime needs.
