

The effects of humidity on the self-discharge properties of $\text{Li}(\text{Ni}_{1/3}\text{Co}_{1/3}\text{Mn}_{1/3})\text{O}_2/\text{graphite}$ and $\text{LiCoO}_2/\text{graphite}$ lithium-ion batteries during storage . S. Byun, J. Park, W. A. Appiah, M. Ryou and Y. M. Lee, RSC Adv., 2017, 7, 10915 DOI: 10.1039/C6RA28516C This article is licensed under a Creative Commons Attribution 3.0 Unported Licence.

The air cooling system has been widely used in battery thermal management systems (BTMS) for electric vehicles due to its low cost, high design flexibility, and excellent reliability [7], [8] order to improve traditional forced convection air cooling [9], [10], recent research efforts on enhancing wind-cooled BTMS have generally been categorized into the ...

Introduction Lithium-ion batteries are foundational to modern technology, powering everything from smartphones to electric vehicles. Their efficient energy storage has led to surging demand amid a global shift toward sustainable energy solutions. The quality of these batteries is especially crucial for electric vehicles, where performance and safety are paramount. Manufacturing high ...

The conventional LiCoO_2 has been considered as one of the most important cathode materials for lithium-ion batteries because of its high working voltage, outstanding rate ...

In addition, the promotion and use of lithium-ion batteries in various complex environments and scenarios, such as coastal high-humidity areas, high-altitude low-pressure and cold environments, and high-temperature, high-dust environments in mine shafts, will impact the physicochemical reactions of lithium-ion batteries during use, altering their aging behavior ...

Herein, the humidity tolerance of halide solid-state electrolytes using the soft acid element In-doped Li_2ZrCl_6 is investigated and found that $\text{hc-Li}_{0.8}\text{Zr}_{0.2}\text{In}_{0.8}\text{Cl}_6$ has high ionic conductivity, good thermal stability, and hygroscopic reversibility, which will greatly enhance the commercialization of all-solid-state lithium batteries.

A study was performed to determine the cause of abnormal direct current resistance (DCR) during high-temperature storage of a commercialized lithium-ion battery (1C=50 Ah) designed for an electrical

All around the world, supported by mobile and stationary Trotec drying technology, companies produce lithium-based energy accumulators that convince by durability and a high energy ...

As shown in Fig. 8 (b) the temperature variation of the battery at different ambient humidity. At high humidity (90 % RH), when water mist will cover the surface of the battery, making the battery heat dissipation less effective, making the battery temperature slightly higher than the ...

The high-temperature and high-humidity storage behaviors and electrochemical degradation mechanism of $\text{LiNi}_{0.6}\text{Co}_{0.2}\text{Mn}_{0.2}\text{O}_2$ cathode material are investigated systematically. After stored at $55 \pm 1^\circ\text{C}$ and 80% relative humidity, three kinds of changes are observed compared to the fresh materials. The first change is adsorbed species on the surface of the materials caused ...

Halide solid-state electrolytes (SSEs) hold promise for the commercialization of all-solid-state lithium batteries (ASSLBs); however, the currently cost-effective zirconium-based ...

The high-temperature and high-humidity storage behaviors and electrochemical degradation mechanism of $\text{LiNi}_{0.6}\text{Co}_{0.2}\text{Mn}_{0.2}\text{O}_2$ cathode material for lithium ion batteries Journal of Power Sources, Volume 363, 2017, pp. 168-176

Hence, this work focuses on the effect of humidity on self-discharging and battery degradation behaviour. Herein, we try to unveil the effect of relative humidity on self ...

The manufacturing of lithium-ion batteries takes place in ultra-low humidity dry rooms. This can range from from small R& D labs, all the way through to large scale mass production facilities. Changing Lithium-Ion Battery ...

To address this issue, we developed a gas sensor with high humidity resistance for detecting H_2 generation during thermal runaway of lithium batteries, enabling early warnings. The sensor, based on Ce-doped MoS_2 , was further enhanced its hydrophobic via incorporating amphiphiles. This sensor demonstrated excellent H_2 selectivity in the presence of CO , C_3H_6 ...

As demand for higher discharge rates surges, the trend towards colder liquid cooling in high-humidity environments poses condensation risks in lithium-ion battery thermal management systems, potentially leading to electrical safety hazards. This study introduces an innovative hybrid air-cooled and liquid-cooled system designed to mitigate condensation in lithium-ion ...
