

Solar energy is clean, green, and virtually limitless. Yet its intermittent nature necessitates the use of efficient energy storage systems to achieve effective harnessing and utilization of solar energy. Solar-to-electrochemical energy storage represents an important solar utilization pathway. Photo-rechargeable electrochemical energy storage technologies, that are ...

The structural energy storage composites (SESCs) (Fig. 9) were engineered with a composition that included high-strength carbon fiber, high-dielectric epoxy resin, and internally synthesized pollution-free zinc-ion batteries (ZIBs). This innovative design exhibited remarkable performance metrics, featuring a notable energy density of 115.2 Wh/kg, and a ...

Aqueous ammonium-ion batteries have attracted intense interest lately as promising energy storage systems due to the price advantage and fast charge/discharge ...

DOI: 10.1016/J.ELECTACTA.2014.02.082 Corpus ID: 94058959; Nickel-cobalt layered double hydroxide anchored zinc oxide nanowires grown on carbon fiber cloth for high-performance flexible pseudocapacitive energy storage devices

A fiber material is composed of a group of flexible fibers that are assembled in a certain dimensionality. With its good flexibility, high porosity, and large surface area, it demonstrates a great potential in the development of flexible and wearable electronics. In this work, a kind of nickel/active material-coated flexible fiber (NMF) electrodes, such as ...

Unleashing the Potential of MXene-Based Flexible Materials for High-Performance Energy Storage Devices. Yunlei Zhou, Corresponding Author. Yunlei Zhou ...

This work puts forward a simple and feasible strategy to prepare high-performance lignin-based carbon nanofibers energy generator and storage for ...

Low-Cost, High-Performance Carbon Fiber for Compressed Natural Gas Storage Tanks PI/Presenter: Xiaodong "Chris" Li University of Virginia. DE-EE0009239. June 6 th, 2023. DOE Hydrogen Program. 2023 Annual Merit Review and Peer Evaluation Meeting

Integration into power textiles. The fiber shape makes it easy for integration. We had designed a three-electrode-twisted structure to integrate the properties of the lithium-ion battery and the ...

Production of electrodes with extended cycle life, as well as high energy and power densities, coupled with flexibility, remains a challenge. ...

In this study, an energy storage multifunctional sandwich structure (ESMS) was designed to perform well-balanced and excellent multifunctional performance. The corrugated core sandwich structure was newly developed to prevent the degradation of mechanical properties even when lithium polymer (LiPo) batteries are integrated. The empty space of the ...

Hard carbon materials are attracted as excellent anode materials for sodium-ion batteries due to their good electrical conductivity, high reversible capacity, low operating voltage and stable cycling performance. Herein, waste denim fabrics were used as raw material to prepare denim-based hard carbon (DHC) via a one-step carbonization method, and its sodium ...

Low-Cost, High-Performance Carbon Fiber for Compressed Natural Gas Storage Tanks PI/Presenter: Xiaodong "Chris" Li University of Virginia DE-EE0009239 ... oThe cost of a conventional fiber-wound CNG storage tank can be reduced by 35% (< \$14/lb) with the use of the developed low-cost CF

However, for most fiber electrodes reported so far, compromises have to be made between energy-storage capacity and mechanical/electrical performance, whereas a graphene fiber with high ...

In recent years, numerous discoveries and investigations have been remarked for the development of carbon-based polymer nanocomposites. Carbon-based ...

Our work demonstrates hierarchical interface engineering as an effective strategy to promote the high-temperature energy storage performance of fiber-reinforced polymer nanocomposites, which is of ...
