

What is a solar power plant?

It is a large-scale PV plant designed to produce bulk electrical power from solar radiation. The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels.

Where can a solar power plant be installed?

For a bulk generation, this plant can be installed in any land. So, there are no specific site selection criteria like thermal and hydropower plants. The solar plant can be installed on the house or flat. So, it reduces the transmission cost as it generates energy near the load center.

Who owns a solar energy system?

The system can be on- or off-site and may be owned by utilities, a solar developer, non-profit entities, or multiple community members. Learn more about community and shared solar. If you lease a solar energy system, you are able to use the power it produces, but someone else--a third party--owns the PV system equipment.

What is a photovoltaic (PV) system?

Photovoltaic (PV) systems typically comprise many solar panels that may convert energy into useful power. Solar power generates electricity by converting sunlight energy. The sun generates two types of energy that we can use: electricity and heat.

What is a solar thermal power plant?

A solar thermal plant is a facility that converts solar energy into electricity using a standard thermodynamic cycle. Unlike thermal power plants, which use fossil fuels, solar thermal power plants use a totally environmentally beneficial energy source, such as sunlight.

Is a solar power plant a conventional power plant?

The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels. Or there is another way to produce electrical energy that is concentrated solar energy.
