

Household solar panel prices for home use

How much do solar panels cost in the UK?

The most common type of system is the 4kW solar system, which costs between £5,000 - £6,000. It can save the average household about £660 per year, provided that they have a decent number of sunlight hours and are installed on a south-facing roof. In 2025, the price of solar panels in the UK can vary depending on several factors.

How much does a solar panel cost per kilowatt?

Exactly how much a solar panel costs per kilowatt depends on the type of solar panel you're talking about. Monocrystalline solar panels are the most expensive, and their cost per kW is somewhere around £1,000 - £1,500, whereas polycrystalline solar panels cost about £900 per kW.

What costs should you consider before installing solar panels?

There are two other potential costs you should look into before installing solar panels, these are maintenance costs and repair costs.

How much does a 350 watt solar panel cost?

The average cost of a 350-watt solar panel in the UK is between £150-£300. The most common solar installation is a 3.5 kilowatt-peak (kWp) system. According to the Energy Saving Trust, the average 3.5kW solar panel system would typically require around 10 solar panels (at 350 W each) and cost around £7,000.

How much does a 4KW Solar System cost in the UK?

GreenMatch's research has found the average price of a domestic 4kW solar panel system in the UK can range between £5,000 - £6,000 (including installation costs), depending on the type of panels you install, their wattage and the manufacturer.

Why do solar panels cost so much?

Costs can vary regionally due to labour rates and market competition differences. Additionally, various incentives and schemes, such as feed-in tariffs or government grants, can affect the overall cost of solar panels. These incentives promote renewable energy adoption and can help offset some of the installation costs.
