

How to connect solar panels and photovoltaic new policies

Can a solar PV system be connected to the National Grid?

While it is possible to have a solar PV system that is not connected to the National Grid, choosing not to connect means missing out on potentially lucrative incentive schemes like the government's Feed-In Tariff (FIT). Here is a list of FAQs on connecting to the National Grid.

Can solar panels be installed without a planning system?

Changes to permitted development rights rules will mean more homeowners and businesses will be able to install solar panels on their roofs without going through the planning system. Currently those who have to go through the planning system are having to wait over eight weeks and face extra costs.

Do you need planning permission to install solar panels?

Current rules that require businesses to apply for planning permission if solar panels will generate more than one megawatt of electricity will also be scrapped, meaning organisations will be able to install more solar panels on rooftops without the delay and cost of applying for planning permission.

What is solar PV policy?

Solar PV policy is not without its challenges. In particular, solar PV deployment requires careful consideration to ensure appropriate use of land and buildings, and ensures that the views of local communities are heard (see page 24).

How difficult is it to connect a solar PV system?

The tasks required to get a solar PV system connected to the grid vary with the size of generating plant but generally, the larger the plant the more complex the connection requirements. Small-scale solar PV is not currently experiencing the same difficulties as some larger-scaled installations. 78.

How to wire solar panels together?

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.

A simple system doesn't involve any re-wiring, and doesn't change any of the wiring to the rest of the house. The solar panels connect into your consumer unit as a new dedicated circuit.

By cutting red-tape in the planning system we can make sure homeowners and businesses can install solar panels without being held up by costly delays.
