Photovoltaic motors use the electricity generated by solar cells to power an electric motor. The motor can be a direct current (DC) motor, an alternating current (AC) motor, or a stepper motor.

Photovoltaic (PV) technology converts sunlight into electrical energy in a direct way, as opposed to the more circuitous approach of solar thermal technologies that capture sunlight to heat a gas or fluid and subsequently use heat engines to generate electricity. Individual solar cells create relatively low voltage, typically of around 0.5 V.
