

How do you know if a solar panel is defective?

If there is a significant drop in energy production from a specific panel, it may be defective. Inspecting your solar panels regularly for physical damage or discoloration is crucial. Hailstorms, fallen debris, or extreme weather conditions can cause cracks, chips, or scratches on the surface of the panels.

What happens if a solar panel is bad?

In some cases, a bad solar panel may also cause your inverter to display an error message. To determine if a solar panel is bad, look for signs such as decreased energy production, physical damage or discoloration, hot spots, potential-induced degradation (PID), and monitoring system alerts.

How do I know if my solar panel is delaminating?

You can detect the start of delamination by bubbles and creases on the plastic rear surface. Some owners try using duct tape and sealant to slow the process down, but such a panel isn't going to last long. So, once you've seen any of the signs of delamination, contact your installer immediately. Microcracks are another type of solar panel problem.

What are the signs of potential induced degradation of solar panels?

There are no visual signs of potential induced degradation of solar cells and panels, but it can be detected with an infrared camera, electroluminescence or photoluminescence testing. So, if you suspect that PID might take place - for example, you get much less energy than expected - invite an expert for an inspection.

How do I know if my solar panel is PID?

PID is more common in older panels or those with poor grounding or insulation. To diagnose PID, you can hire a solar technician to perform a test known as the "EL imaging" test, which can identify the extent of PID and recommend suitable remedial measures.

How do I know if my solar system is bad?

Check the grid voltage on the inverter display or app for over-voltage issues. Hire a solar professional or electrician to inspect the solar system. Micro-cracks may not cause any noticeable performance issues at first, but over several years, they can sometimes develop into more serious problems and result in system failure.
