

# How to install a 200w solar panel for home use

Where can I buy DIY solar panels?

Several companies specialise in selling DIY solar panel kits to the public. Plug-in Solaris particularly easy to follow, and offers a wide range of kits and step-by-step DIY guides, plus accessories such as solar panel mounting kits. Renology, Select Solar and Sunstore Solar are also well worth a browse.

How do I plan a DIY solar system?

Take a deep breath, it's time to plan your DIY solar system. What do you need electricity for? The first step to any DIY solar panel installation is calculating your electricity demand. For grid-tie home solar panels, take a look at your electricity bills. You can design your system to meet your average monthly kilowatt hour consumption.

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

How do you wire a solar panel system?

The critical step of wiring your solar panel system involves tasks such as connecting the panels, installing a charge controller, and setting up a power inverter. This ensures your system can convert and use the solar energy efficiently. Depending on your desired output voltages and currents, you can connect your solar panels in series or parallel.

How do I choose a battery for a DIY solar panel?

Choosing the capacity for your battery is largely up to your budget, so for this basic DIY solar panel installation, we recommend a 12V solar panel 100 Amp hour (Ahr) battery. For any battery-backed DIY solar panel system, choosing a PWM charge controller, rather than a MPPT, will be less efficient, but more cost effective.

How many Watts Does a solar panel need?

Assuming for 4 hours of ideal sunlight per day, the total watt power of your solar panels will need to be around 180 watts ( $720\text{Wh}/4\text{h}=180\text{W}$ ). Leaving a little bit of wiggle room, a 200 Watt solar panel (or two 100 Watt solar panels) is perfect. Most small solar systems have batteries rated at 12V or 24V.
