

How do I plan a solar panel installation?

Choose a supplier and establish if the installation will fall under Permitted Development or if full planning permission is required 3. Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5.

How do you install solar panels on a roof?

Rail and Panel Installation The cheapest and most practical way to install solar panels is with a combination of rails and brackets. A secure hook is fastened to the rafters underneath your roof tiles and the rails are attached to these exposed hooks across the length of the solar array.

Can I install solar panels on my own?

Technically, yes, you can install solar panels on your own - but we strongly discourage you from doing so, unless you're a certified installer. You'll need expertise in roofing and electrical work, as well as specialist equipment and - in most cases - scaffolding.

How do I choose a solar energy installer?

Look for installers that have a proven track record and check if they are accredited by relevant industry bodies, such as the Microgeneration Certification Scheme (MCS) and/or the Renewable Energy Consumer Code (RECC).

What is needed to install solar panels on UK homes?

Here's a quick guide to what's needed to install solar panels on UK homes: An installer should visit to determine if the property is suitable for solar panels. They will look at the size and orientation of the roof to decide the best location and angle for installing panels.

Do I need a planning permission to install solar panels?

"Solar panels are usually installed under General Permitted Development Order (GPDO) which means that you would not need a separate planning permission application," David says. "That said, it is up to you as the homeowner to be sure that you do indeed have GPDO rights on your property and that the installation will comply."
