

How to invoice and pay tax for solar photovoltaic power generation

Do I have to pay income tax if I generate electricity?

Where the generation tariff is received by an individual, other than in a business capacity, and it is not chargeable as miscellaneous income, no Income Tax liability will arise. This will usually be the case where an individual generates electricity mainly for use in their own home.

What are the tax rules for electricity installation?

There are two different sets of tax rules, depending principally on whether the installation is domestic or commercial. The contract documentation will state the type of installation. A domestic installation is normally mounted on the farmhouse roof (occasionally in the garden) and provides electricity solely to the dwelling.

Are electricity sales taxable?

This includes both sales of exported electricity and any Feed in Tariff. Any income from a domestic installation at a let dwelling is taxable (even though capital allowances are denied). The principal incentive for residential landlords is to improve the EPC rating (but your tenant will appreciate the lower energy costs).

Do solar installations qualify for HMRC tax relief?

HMRC regard solar installations as a long-life asset, which sometimes reduces relief. However, the installations do qualify for 100% Annual Investment Allowance (which is available for up to £1,000,000 of total qualifying expenditure by most standalone farming sole traders, partnerships or companies in the year ending 31 March 2023).

Is a generation tariff liable for income tax?

A generation tariff received in a private capacity, which is not chargeable as miscellaneous income, will not be liable to Income Tax but the reduced cost of electricity should be reflected in the cost of electricity attributed to business use. An export tariff is payable for electricity exported to the wider energy market.

How does the electricity tax exemption work?

The exemption requires that the amount generated is primarily intended to match the amount consumed in the domestic premises; not that most of the electricity is consumed in those premises. So as long as the installation doesn't generate far more electricity than is used in the home overall, the income should still be tax-free.

According to the International Energy Agency, there are some circumstances where solar photovoltaic (PV) is now the cheapest electricity source in history. 4 This is because the price of solar has fallen sharply ...

How to Calculate the Federal Solar Tax Credit. Currently, the ITC is 30% of the gross system cost of your solar project. The gross system cost includes any improvements ...
