Once everything is prepared and ready, follow these steps to replace your stripped key fob screw: 1) Remove any debris from around the old screw using an air compressor or compressed air canister; 2) Securely grip and unscrew the old stripped key fob screw using either a Phillips or Torx head driver; 3) Once loosened, carefully remove any remaining pieces of stripped metal; ...

So, I ordered a new top screen as well as a new case to fix it. Though, when I got the screws off with the official screwdrivers, I stripped one (The upper right triangular one). Now, no matter what I do, I can't remove it. I tried using glue, a rubber band etc. but the screw hasn't even moved. I'm really wondering what I should do here.

For the less stripped one, it looks like using a rubber band should work. When doing this you need to do it slowly and it usually takes some time and a lot of tries.. For the other one, try to use a needle or something similar and see if you can get rid of the stripped away metal and then try the rubber band.. If that doesn't work, the best thing I can think of now is to take a screwdriver ...

Generally only the center of the screw strips. Using a screw driver with a larger tip may work. If you have already removed one of the screws, wrap some tape around the ...
