

What is a portable solar charger?

A portable solar charger is used to power your device when you're away from power outlets. We took this into account when we chose to weight direct solar charging speed the heaviest in our testing metrics. It's also no surprise that some of our highest-scoring panels in this metric were chargers with the largest capacity.

Which solar charger should I buy?

The Goal Zero nomad 2 has everything you might need in a solar charger: high wattage, an abundance of USB ports and a business-like folding design and the leading monocrystalline panel type. For mains-style power output on demand, the Ecoflow portable power station and 220W panel is highly recommended.

How much does a portable solar charger cost?

Specifically for this buyer's guide, we conducted online research and identified over a dozen portable solar chargers ranging in price from \$30 to \$649. After careful consideration, we narrowed down the candidates to a handful that we tested in real-world conditions.

How many Watts should a portable solar charger charge?

Once you get an idea of charging capacity and your intended use for a portable solar charger, it's time to figure out what devices you plan on using. For smaller handheld items such as smartphones, a portable solar charger with five to fifteen watts should suffice.

What is a solar charger & how does it work?

Enter the solar charger - a nifty device that generates electricity through the power of sunlight. The sun's rays are turned into energy that can then be used to charge various gadgets including mobile phones, laptops and tablets. This must-have can be as compact as a typical portable charger yet remain reliable and long-lasting.

Can a solar panel charge a battery?

These chargers are usually designed to be used more like a portable battery pack and less like a solar panel because the solar panel often isn't big enough to reliably generate a lot of power from the sun. The panel will work in a pinch, but it can be slow to charge the integrated battery.
