The only time you're exclusively on battery power is when the engine is off (or, of course, if the alternator has failed). With the engine running the alternator supplies current that both recharges the battery- or, once it's recharged, maintains the charge - and runs the rest of the stuff on the car. ... When you have a power supply, it needs ...

Cons of Running Laptop on Battery Power. When using battery power, there are some drawbacks to keep in mind:. Limited Battery Life: Your laptop's battery has a finite number of charge cycles, meaning it will gradually hold less power over time.; Dependency on Charging: Constantly needing to recharge your battery can disrupt your workflow, especially if you forget ...

+1.3V, +2.5V, +5V, etc. And these voltage regulators can be supplied from 2 distinct and isolated power sources: an external 12V source (aka, your AC power adapter), or the internal battery. If external DC voltage is detected, EVERYTHING else is powered from that external source. Including the charging circuits that manage the battery recharge.
