

What are the different sizes of lithium ion batteries?

The most commonly used lithium-ion cell sizes are 18650 (18mm diameter, 65mm length), 21700 (21mm diameter, 70mm length), and 26650 (26mm diameter, 65mm length). Lithium-ion battery cells are a revolutionary invention for the portable electronics and energy storage. They have high energy density, lightweight design, and long cycle life.

What is the smallest size lithium battery?

If we particularly talk about Ufine's small-size lithium batteries, they offer a range of compact lithium batteries. This includes their smallest size lithium battery - the 3.7V 300mAh lithium-ion battery. Although it comes in a small size, it is considered an act of punch as it provides reliable power for several low-power applications.

What is a large sized lithium battery?

So, large-sized batteries are designed using lithium chemistries so that their battery life and performance can be increased. Ufine is providing an extensive range of lithium batteries. These include the largest size lithium battery, i.e., 48V 100Ah LiFePO₄ battery.

What are Li ion battery cells used for?

The Li ion battery cell sizes have wide applications in several electronic devices. These applications may include LED art, digital watches, automobile remotes, or computer motherboards. Hence, they are now becoming a crucial part of our daily lives.

What are lithium ion cells?

Lithium-ion cells are made in various sizes, often assembled into battery packs for portable equipment. Many types are also available with an internal protection circuit to prevent over-discharge and short-circuit damage.

What is a lithium ion battery?

There is also a kind of special lithium ion battery on the market. That is the 1.5V rechargeable AA and AAA Li-ion batteries. It is a 3.6/3.7V lithium battery stepped down to a 1.5V constant voltage output through a built-in circuit module. It can replace the normal disposable AA/AAA alkaline batteries, more environmentally friendly.
