

Why is electricity storage important in Lithuania?

Lithuania's system of electricity storage facilities is essential to ensure the security of Lithuania's energy system and its ability to operate in isolated mode.

Which energy storage facilities will provide Lithuania with instantaneous electricity reserve?

The Government of the Republic of Lithuania appointed Energy cells as the operator of the storage facilities that will provide Lithuania with an instantaneous electricity reserve. Energy cells signed a contract with the winning Siemens Energy and Fluence consortium. Energy storage facilities system design works were started.

How will Lithuania's energy storage system work?

The energy storage system, which will provide Lithuania with an instantaneous isolated operation electricity reserve until synchronisation with the continental European networks (CEN), will be used after synchronisation for the integration of energy produced from renewable sources.

What are the major manufacturing activities in Lithuania?

Another significant manufacturing activity in Lithuania is a chemical product which accounts for over 12.5% of its total export. Over 80% of the chemicals produced in Lithuania are exported. The furniture production sector employs over 50,000 individuals in Lithuania, with the biggest firms in this industry working together with IKEA.

What are the main exports of Lithuania?

Exports include electricity, hydrogen, fertilizer products and synthetic fuels. Almost half of Lithuanian final energetic and non-energetic energy covered by electricity. Hydrogen serves as feedstock for fertilizer, chemical and synthetic fuel industries, heat production for industry, and transportation fuel.

When will Lithuanian power plants start supplying power?

Lithuanian power plants currently operating in the IPS/UPS system can start supplying power within 15 minutes. Once synchronised with the CEN system, the energy storage facilities will be able to store electricity generated by solar or wind power plants and feed it into the grid when needed.
