

Are perovskite solar cells efficient and stable?

Efficient and Stable p-i-n Perovskite Solar Cells Enabled by In Situ Functional Group Conversion Chemical additives play a critical role in the crystallization kinetics and film morphology of perovskite solar cells (pero-SCs), thus affecting the device performance and stability.

What are metal halide perovskite solar cells?

Metal halide perovskite solar cells are emerging as next-generation photovoltaics, offering an alternative to silicon-based cells. This Primer gives an overview of how to fabricate the photoactive layer, electrodes and charge transport layers in perovskite solar cells, including assembly into devices and scale-up for future commercial viability.

What is the perovskite database?

The Perovskite Database is a database and analysis tool of perovskite solar cells research data which systematically integrates over 15,000 publications, in particular device-data about "over 42,400" perovskite devices.

Do perovskite solar cells employ organic charge-transport layers?

"Perovskite solar cells employing organic charge-transport layers". Nature Photonics. 8 (2): 128-132.

Are all-inorganic lead-free perovskite solar cells efficient?

"Highly stable and efficient all-inorganic lead-free perovskite solar cells with native-oxide passivation". Nature Communications. 10 (1): 16.

Are perovskite solar cell bandgaps tunable?

Perovskite solar cell bandgaps are tunable and can be optimised for the solar spectrum by altering the halide content in the film (i.e., by mixing I and Br).

The structure of perovskite. The design of solar cells based on perovskite has undergone enormous development, new manufacturing methods have been used: ...

With the M2N group we investigate perovskite solar cells from different perspectives: Band gap tuning The  $\text{CH}_3\text{NH}_3\text{PbI}_3$  perovskite has a band gap of about 1.55 eV. Tuning of the band gap can be accomplished in several ways ...

A perovskite solar cell. A perovskite solar cell (PSC) is a type of solar cell that includes a perovskite-structured compound, most commonly a hybrid organic-inorganic lead or tin halide-based material as the light-harvesting ...

Perovskite solar cells (PSCs) have emerged as a viable photovoltaic technology, with significant improvements in power conversion efficiency (PCE) over the past decade. This review provides a comprehensive overview of the progress, challenges, and future prospects of PSCs. Historical milestones, including unique properties of perovskite ...

Perovskite solar cells (PSCs) suffer from a quick efficiency drop after fabrication, partly due to surface defects, and efficiency can be further enhanced with the passivation of surface defects. Herein, surface passivation ...

The group's research is centred around bridging chemistry, physics, and materials engineering disciplines to advance perovskite multi-junction solar cells. Our work is organised into three main thrusts: Materials Innovation: This thrust ...

The discovery of perovskite crystals in the Ural Mountains in the 19 th century was followed by the discovery of metal halide perovskites some 50 years later. Over a century passed ...

Our research proposes to harness this potential through the development of solar cells. This can be achieved for example through the development of novel cells using polymer of small dye molecules to absorb light and convert it into electricity, or by designing systems mimicking photosynthesis, through our multidisciplinary "artificial leaf" programme.

Organic-inorganic lead halide perovskite solar cells (PSCs) have attracted significant interest from the photovoltaic (PV) community due to suitable optoelectronic properties, low manufacturing cost, and tremendous PV performance with a certified power conversion efficiency (PCE) of up to 26.5%. However, long-term operational stability should be ...

Perovskite solar cells (PSCs) have emerged as a promising technology for renewable energy generation due to their low-cost materials and high-power conversion efficiencies (PCE). ... Gao et al. used chloride-based ILs with nitrile groups as additives in perovskite precursor solutions. The ILs improved the quality of perovskite films and ...

Simultaneously passivating the perovskite surface defects and suppressing Li<sup>+</sup> ions diffusion of hole transport layer (HTL) are still challenging issues. Herein, we report an effective "three birds with one stone" strategy by utilizing sodium 4,4'-(1,4-phenylenebis(oxy))bis(butane-1-sulfonate) (ZR3) containing sulfonic acid groups (SO<sub>3</sub><sup>-</sup>) and ...

Description. SOLVE - Solar Electricity Research Centre, Sweden - is a consortium of universities and public/private sector partners performing collaborative, needs-driven research projects aiming at rapid expansion of solar energy in the Swedish electric grid.. Within the framework of SOLVE, we perform advanced studies on stability on perovskite solar ...

Chemical additives play a critical role in the crystallization kinetics and film morphology of perovskite solar cells (pero-SCs), thus affecting the device performance and stability. Especially, carboxylic acids and their ...

Metal halide perovskite solar cells are emerging as next-generation photovoltaics, offering an alternative to silicon-based cells.

State-of-the-art PSCs use organic ammonium ligands to address surface defects and reduce nonradiative recombination at the perovskite-charge transport layer interface, enabled by the ammonium ...

Although Sn-based perovskite solar cells (PSC) have impressive conversion efficiency, their stability needs to be improved. Herein, 3,4,5-trifluorophenol (C<sub>6</sub>H<sub>3</sub>F<sub>3</sub>O) ...
