

# Midstream enterprises in the lithium battery industry

What is the global market for lithium-ion batteries?

The global market for Lithium-ion batteries is expanding rapidly. We take a closer look at new value chain solutions that can help meet the growing demand.

Where can lithium be mined?

Lithium reserves are well distributed and theoretically sufficient to cover battery demand, but high-grade deposits are mainly limited to Argentina, Australia, Chile, and China. With technological shifts toward more lithium-heavy batteries, lithium mining will need to increase significantly.

Is the battery industry a linear value chain?

In many respects, the current battery industry still acts as a linear value chain in which products are disposed of after use. Circularity, which focuses on reusing or recycling materials, or both, can reduce GHG intensity while creating additional economic value (Exhibit 14).

What is the value chain depth and concentration of the battery industry?

Value chain depth and concentration of the battery industry vary by country (Exhibit 16). While China has many mature segments, cell suppliers are increasingly announcing capacity expansion in Europe, the United States, and other major markets, to be closer to car manufacturers.

What percentage of lithium is mined?

Almost 60 percent of today's lithium is mined for battery-related applications, a figure that could reach 95 percent by 2030 (Exhibit 5). Lithium reserves are well distributed and theoretically sufficient to cover battery demand, but high-grade deposits are mainly limited to Argentina, Australia, Chile, and China.

How big will lithium-ion batteries be in 2022?

But a 2022 analysis by the McKinsey Battery Insights team projects that the entire lithium-ion (Li-ion) battery chain, from mining through recycling, could grow by over 30 percent annually from 2022 to 2030, when it would reach a value of more than \$400 billion and a market size of 4.7 TWh. 1

Developing regional capacity in the battery materials midstream is crucial to improving component supply security and battery sustainability. In reviewing the current ...

demand for downstream new energy vehicles has directly driven up the demand for midstream power batteries, which has been transmitted to the upstream power battery raw material. ... battery industry, from both the perspective of cost reduction and the perspective of battery ... cobalt-nickel mineral enterprises such as Gan Feng Lithium and Hua ...

## Midstream enterprises in the lithium battery industry

The industry chain of consumer battery cells mainly includes three segments: upstream raw material supply, midstream battery manufacturing, and downstream application product manufacturing. The upstream segment primarily involves the supply of raw materials for battery cells, such as cathode materials, anode materials, electrolytes, and separators. The ...

Midstream: China's domestic power battery companies are led by CATL, followed by BYD, and other pursuers include Guoxuan Hi-Tech, LG New Energy, and China Innovation Aviation.

The global demand for lithium mining, battery production, and recycling is soaring, and these processes make difficult demands on control valves. ... The power industry accounts for an additional 23% of emissions, ...

The upstream, midstream, and downstream processes are represented in green, yellow, and red, respectively. from publication: Sustainable Reuse and Recycling of Spent Li-Ion ...

In 2025, after the adjustment of the lithium battery sector in 2023, the profitability of all links will bottom out, the inventory cycle of midstream materials will complete the decline, ...

Taking the lithium industry for example, leading Chinese battery manufacturers such as CATL and BYD have either obtained equity stakes or secured long-term ...

Several use cases are driving the need for battery technology, led by the shift to sustainability. The continued penetration of battery electric vehicles (BEVs), ...

Arcadium Lithium: A New, Fully Integrated Lithium Major Finalized in early January 2024, the merger of Livent and Allkem is the largest such event in the lithium industry's history. The combined entity, Arcadium Lithium ("Arcadium"), joins Albemarle, Ganfeng, and Tianqi as lithium producers with offerings across all

As revealed from the results, the upstream end of the power batteries recycle system in China is not yet perfect, the production capacity at the midstream end tends to be excess, and the ...

We'll continue our closer look at the lithium midstream production process in future posts exploring process optimization, safe operations, and reliability improvements. Visit the links above for more on ...

What the Trump Presidency means for the EV and battery industry Published 06 November 2024 ... Considering the storage market, 92% of lithium-ion storage projects deployed this year in the US were LFP, 100% of these cells were sourced from China. By 2026 US-made LFP cells, supported by IRA Production Tax Credits, are projected to cost around ...

The number of trade network edges in the midstream of the lithium industry chain plummeted to 181 in 2001, 381 in 2007. ... with the gradual resumption of work by enterprises, the trade of midstream and downstream

## **Midstream enterprises in the lithium battery industry**

products resumed, while the extensive use of electronic equipment during the epidemic also drove the demand for related products, so ...

The lithium battery industry chain includes multiple segments such as upstream raw material exploration and processing, midstream lithium battery materials and lithium battery manufacturing, and downstream lithium battery application and recycling. These segments are interrelated and promote each other, jointly forming the complete chain of the ...

[Prices in the Midstream and Upstream PV Sector Continue to Rise, Signs of Recovery Emerging; Industry Awaits Confirmation of a Reversal Trend] (1) This week, silicon wafer prices saw a maximum increase of over 9%, but the operational performance of silicon wafer companies has yet to show substantial improvement. Whether prices can rebound ...
