Is lithium a good negative electrode material for rechargeable batteries?

Lithium (Li) metal is widely recognized as a highly promising negative electrode material for next-generation high-energy-density rechargeable batteries due to its exceptional specific capacity ( $3860 \text{ mAh g}^{-1}$ ), low electrochemical potential ( $-3.04 \text{ V}$  vs. standard hydrogen electrode), and low density ( $0.534 \text{ g cm}^{-3}$ ).

Can a negative electrode material be used for Li-ion batteries?

We have developed a method which is adaptable and straightforward for the production of a negative electrode material based on Si/carbon nanotube (Si/CNTs) composite for Li-ion batteries.

Can lithium be a negative electrode for high-energy-density batteries?

Lithium (Li) metal shows promise as a negative electrode for high-energy-density batteries, but challenges like dendritic Li deposits and low Coulombic efficiency hinder its widespread large-scale adoption.

Can CNT composite be used as a negative electrode in Li ion battery?

The performance of the synthesized composite as an active negative electrode material in Li ion battery has been studied. It has been shown through SEM as well as impedance analyses that the enhancement of charge transfer resistance, after 100 cycles, becomes limited due to the presence of CNT network in the Si-decorated CNT composite.

What are the limitations of a negative electrode?

The limitations in potential for the electroactive material of the negative electrode are less important than in the past thanks to the advent of 5 V electrode materials for the cathode in lithium-cell batteries. However, to maintain cell voltage, a deep study of new electrolyte-solvent combinations is required.

Are skutterudite antimonides suitable for lithium-ion batteries?

Skutterudite antimonides have been the subject of intensive work during the last decade, due to the promising efficiency of their thermoelectric effect. With the aim of finding alternative anode materials for lithium-ion batteries, the electrochemical reactions of  $\text{CoSb}_3$  with lithium have been recently described.
