What is the future of perovskite solar cells?

The future of perovskite solar cells (PSCs) is bright, with newer developments in material science and engineering being carried out to improve upon the efficiency of the cells, search for lead-free perovskite materials, work on the scalability of the technology and integration of flexible and multi-junction perovskite solar cells.

Are perovskite solar cells a viable photovoltaic technology?

Discusses challenges in stability and efficiency with strategies for enhancement. Covers detailed insights on ETM,HTM,and future trends in perovskite solar cells. Perovskite solar cells (PSCs) have emerged as a viable photovoltaic technology,with significant improvements in power conversion efficiency (PCE) over the past decade.

Can perovskite solar cells be used in tandem?

Tandem PSCs: Perovskite solar cells in tandem with other kinds of solar cells like Silicon or CIGS has also been found to exhibit better efficiency. Tandem PSCs have reached over 29 % in the laboratory, Fig. 6, as the tandem structure makes it possible to use the benefits of perovskites and other materials for light trapping .

What is the first report on perovskite solar cells?

J. Am. Chem. Soc. 131,6050-6051 (2009). To our knowledge, this is the first report on perovskite solar cells. Kim, H.-S. et al. Lead iodide perovskite sensitized all-solid-state submicron thin film mesoscopic solar cell with efficiency exceeding 9%. Sci. Rep. 2,591 (2012).

What are tin-lead perovskite absorbers?

A major development in this area is the manufacture of tin-lead (Sn-Pb) perovskite absorbers, which can serve as the bottom cell in tandem solar cells. These materials have band gaps in the range of 1.2-1.3 eV, making them perfect for absorbing the low-energy part of the solar spectrum.

Are perovskite solar cells a disruptive technology?

Silicon is still the most popular technology, whereas thin-film technologies seek application perspectives and cost-effectiveness. Clearly, perovskite solar cells are disruptive in the sense of high efficiency, low cost, and continuous enhancement in stability in the solar industry.

From lab to fab. No solar technology has developed as rapidly as perovskite. The efficiency of perovskite solar cells now exceeds that of thin-film technologies, such as CdTe (cadmium telluride) and CIGS (copper indium gallium selenide).And ...

This Special Issue aims to cover all aspects related to the latest innovations in the crystallization regulation, defect passivation, module design, and device stability of perovskite solar cells. ...
