Which roof material is best for solar panels?

Various roof materials work well with solar arrays; out of them, some are more solar-friendly than others. Composite shingles are considered the best and easiest roof material for solar panel installation.

How to choose a flat roof for solar panels?

Another option for a flat roof is the East/West solar panel mounting systems. This mounting system arranges the panels in a way that reduces wind resistance and ballast requirements. Check that the roof can support the extra weight. Evaluate the roof's structure to see that it can handle the mounting system.

Are all roofs suitable for solar panels?

Yes, all roofs are suitable for solar panels as long as they are durable and have enough strength to bear the weight of a solar panel system. Solar panel systems last for 25 years or more, therefore your roof must be strong enough to handle it at least for that time period.

Is wood a good material for solar panels?

Therefore, wood is not the best material for solar panels. Rooftop solar equipment and installers have come a long way in recent years and most roof materials are suitable for solar panels. With that said, the best roof material is anything that will keep your solar panels secure for their 25-warranted life or longer.

How do I choose a solar panel mounting system?

To make sure that your solar panels last a long time, you need to choose a solar panel mounting system that fits the PV panels and the specific surface they'll be installed on. This means checking that the mounts can hold the weight and size of your panels and are designed for your specific roof or ground conditions.

What is a solar mounting system?

Modern solar mounting systems consist of roof attachments (with or without flashing), mounting rails, and module clamps. These products are designed to allow workers to quickly and effectively install solar panels that will last for decades on the roof, with minimal effect on the roofing materials and no roof leaks.
