

Solar back panel assembly production equipment

A 300MW solar module line is an automatic production line of solar modules. All of the individual equipment has high automation, lowering manual cost and lifting production efficiency. The 300MW line can produce various types of solar panels, single and dual-glass, 5BB-12BB and monocrystalline and polycrystalline silicon.

Our portfolio includes not only automatic solar panel production lines, but also individual equipment for PV modules production, from glass loading equipment at the beginning to solar panel assembly and testing equipment at the end.

ConfirmWare is a leading and trusted provider of automatic machinery for solar panel production lines for local and international manufacturers. All equipment is optimized to perform the intended task with guaranteed precision, and calibrated using state-of-the-art tools.

Solar panels or PV modules are made by assembling solar cells into a frame that protects them from the environment. A typical PV module consists of a layer of protective glass, a layer of cells and a backsheet for insulation. In silicon PV module manufacturing, individual silicon solar cells are soldered together, typically in a 6×10 ...

From assembling the photovoltaic cells to finishing the complete module, each phase is scrupulously carried out by a specific machine. Our engineers design and develop manufacturing equipment for line production of photovoltaic modules or as freestanding units.

Nowadays the solar panels" production equipment is divided into the following required machinery and accessories. The first run automated processes are the stringing and lamination, but also the analysis of quality as electroluminescence tests.

Our automated Solar/PV modules production line includes a complete set of equipment, such as solar cells laser cutting, string soldering, welding, glass loading, layup, laminating, framing, J-Box soldering, curing, final testing, labeling, sorting, and packaging of the produced modules.

Learn how to assemble and produce high-quality solar modules. By understanding the photovoltaic module production process and to learn which machines are involved in the production of a module, gives you the knowledge to understand the points that are delicate and fundamental for the production helping you in the choice of a reliable and high ...

Solar Photovoltaic Panel Production Line is a high-tech manufacturing process that converts sunlight into

Solar back panel assembly production equipment

electricity using photovoltaic cells, involving cutting, assembling, and packaging solar panels for efficient energy generation.

Explore the solar module manufacturing process in detail and discover how Smartech's solutions enhance efficiency in PV cell production.
