HOME ABOUT US. Company Profile ... Induced draft fans (ID fans) often handle air under harsh conditions, including high temperatures, sour drafts, and other extreme exhaust gases. ...

Where forced draft (FD) fans create positive pressure, induced draft (FD) fans create negative pressure, or put simply, suck air through a system. Frequently ID and FD fans work in concert in boiler applications.

This induced draft fan is for use in domestic chimneys/fireplaces where the outlet temperature must not exceed

80 degrees. The induced draft fan should be kept at least 6 metres away from the fire source. Otherwise, the induced draft fan will be damaged.
