What is solar energy & how does it work?

UK Guide for 2025 Solar energy is a clean, reliable, and ideal source of renewable energy. It can be used to heat the water in your home or produce electricity, all without creating emissions or pollution. In simple terms, solar panels absorb sunlight and convert it into electricity that can be used to power your home.

How to set up a solar panel?

Look for a sunny and safe place, and put the solar panels properly oriented. When needed, connect the devices you want to power to the appropriate connector, and switch on the output. Make sure nothing is connected to the output. Switch on the module (the voltmeter should switch on too, remember). Adjust the output voltage value.

Do solar panels generate electricity?

That said, the rate at which solar panels generate electricity varies depending on the amount of direct sunlight and the quality, size, number and location of panels in use. Even in winter, solar panel technology is still effective; at one point in February 2022, solar was providing more than 20% of the UK's electricity.¹

What is a solar energy system?

Solar energy systems - also known as photovoltaic systems (or PVs) - convert renewable sunlight into electricity, offering a more eco-friendly alternative to traditional power sources. At the heart of these systems are solar panels, which capture solar radiation and generate direct current (DC) electricity.

What is a Screwfix solar panel system?

With Screwfix's range of solar energy systems, you have access to high-efficiency solar panels and innovative inverters, ensuring optimal energy conversion. This section will cover how these technologies work together to power your home, reduce reliance on the grid and create potential long-term cost savings. Is a solar panel system right for me?

What is a solar panel inverter?

Inverters are pivotal in transforming solar power into usable home energy, and your solar energy system cannot work without it. Screwfix provides two primary types of solar panel inverters: These devices convert DC from your solar panels into AC, integrating seamlessly with the home's electrical grid.
