

The Renewables and Wholesale Electricity Prices (ReWEP) tool, allows users to explore trends in nodal wholesale energy pricing and their relationship to wind and solar generation. Variable renewable generation can have important impacts to pricing patterns, but those patterns are often obscured when looking at regional average annual pricing trends.

For example, in Q2 solar PPA prices in the UK rose 18.4% and exceeded £60/MWh, according to a previous PPA Index report from LevelTen. Solar Power Portal's publisher Solar Media will host the Renewable Energy Trading Summit on 6-7 June 2023 in London. The event will explore PPA structuring, revenue risk management strategies, ...

When the generation proportions of hydro, wind, and solar exceed their respective thresholds (19.56%, 5.73%, 0.42%), their significant negative impact on extreme negative electricity price volatility indicates that the increase in these renewable energy sources helps reduce extreme negative price volatility in the power market (Table 6 column (1) (2) (3)).

Another study, "Renewable Generation and Electricity Prices: Taking Stock and New Evidence for Germany and Austria", by Klaas W&#252;rzburg, Xavier Labandeira, Pedro Linares, provides a comprehensive literature review through the year 2013 of empirical studies of the impact of wind generation on wholesale electricity prices.

Concentrating solar power (CSP) has received significant attention among researchers, power-producing companies and state policymakers for its bulk electricity generation capability, overcoming ...

We investigate the impact of wind and solar power generation on the level and volatility of wholesale electricity prices in the Greek electricity market from August 2012 to December 2018. In the context of a GARCH-in-Mean model the empirical findings suggest the existence of the merit-order effect which is stronger in the case of wind power.
