

What is operation & maintenance?

Operation & Maintenance (O&M) is one of the most critical ways to ensure that the solar power system gives the best possible generation. At CleanMax,, we work to maintain the plant infrastructure and equipment, with the goal of improving the equipment's life by preventing excess depreciation and impairment.

What are the key aspects of a solar system maintenance service?

Let's look at the key aspects: Includes planned and periodic tasks to maintain equipment integrity. Cleaning of solar panels. It is carried out to repair breakdowns or unforeseen damage. It cannot be planned and depends on the level of assistance selected. Repair of defective inverters or components.

How to maintain a solar plant site area?

Finally,Let us get some summarize: Maintenance of the Solar Plant Site Area Implement a daily inspection routine and bi-monthly cleaning schedule. Any debris or potential hazards should be promptly addressed to prevent accidents.

How do you manage a photovoltaic power station?

Continuously monitor and document the operating parameters of the photovoltaic power station equipment. Keep track of the electricity generation and maintain an operational ledger for effective management of the power station. Inspection personnel should have a basic ability to analyze faults.

What does CleanMax do when a solar plant is installed?

As a solar plant is installed,engineers at CleanMax prepare a schedule for preventive maintenance. This includes,but is not limited to,adjustments,cleaning,lubrication,repairs,replacements,and the extension of equipment life. At least twice a year,O&M personnel conduct a general inspection of the installation-site.

How to monitor a solar power plant?

Remote monitoring: A solar power plant constantly needs to be monitored to detect breakdowns and optimise its operation. The same function could be performed either on-site or remotely wherein we retrieve all the data either from the inverter or from communicating equipment (probes,meters etc.).
