The resistance of small cables connecting these Gels to the ED8s could help limit the charging current, but, the other real limitation of Gel batteries is that they usually will simply not tolerate charge voltages above their narrow and fairly ...

thought about that solution as well as it works out of the box without any tech know how, but that's going to

eat up that power stations battery life quickly (lets say you have a 1kWh station, which is already a big one at 1000\$ a piece, this would be dead after $2000/14=143$ cycles) causing more financial and environmental damage than you'd gain from the solar setup
