

Should I charge my battery strategically?

As mentioned above, you can charge your battery strategically. GivEnergy home batteries will charge and discharge intelligently by default, taking advantage of cheaper energy rates. However, you can also take a more hands-on approach by setting schedules and timers around your energy usage and lifestyle.

Do GivEnergy home batteries charge & discharge intelligently?

GivEnergy home batteries will charge and discharge intelligently by default, taking advantage of cheaper energy rates. However, you can also take a more hands-on approach by setting schedules and timers around your energy usage and lifestyle. You can do this through the energy monitoring software: portal and app.

What can a charged battery power?

A charged battery could not only power the electric motor, electronics, lights and heating but external devices such as a fridge when camping, a drill on a building site or even another EV. These additional functions are called V2D (vehicle-to-device), and V2L (vehicle-to-load).

Can domestic battery storage be used without renewables?

Short answer: yes. Domestic battery storage without renewables can still benefit you and the grid. This is especially true for those on smart tariffs; charge your battery during cheaper off-peak hours and discharge during more expensive peak hours, cutting your bills and reducing strain on the grid during peak energy use times.

Which EV charging station is considered a fast-charging station?

According to , charging stations available of fast charging with a rated power of more than 22 kW is considered as a fast-charging station. In , a prototype EV charging stations along with energy storage system is presented as shown in Fig. 8. Fig. 8. Prototype of EV charging station along with ESS.

Should you charge your battery if you're on a smart tariff?

This is especially true for those on smart tariffs; charge your battery during cheaper off-peak hours and discharge during more expensive peak hours, cutting your bills and reducing strain on the grid during peak energy use times. Now that we've got that out the way, let's move on to something a bit more complicated.
