

What is a sodium ion battery?

Sodium-ion batteries (NaIBs) were initially developed at roughly the same time as lithium-ion batteries (LIBs) in the 1980s; however, the limitations of charge/discharge rate, cyclability, energy density, and stable voltage profiles made them historically less competitive than their lithium-based counterparts .

What is a Technology Strategy assessment on sodium batteries?

This technology strategy assessment on sodium batteries, released as part of the Long-Duration Storage Shot, contains the findings from the Storage Innovations (SI) 2030 strategic initiative.

Are sodium-ion batteries a viable alternative for EES systems?

Due to the wide availability and low cost of sodium resources, sodium-ion batteries (SIBs) are regarded as a promising alternative for next-generation large-scale EES systems.

How will the demand for sodium-ion batteries increase in India?

As the demand for sodium-ion batteries increases, similar efforts will be made to establish equipment manufacturing for sodium-ion cells in India. By around 2025, it is anticipated that the installation of equipment for sodium-ion batteries will be in progress, enabling the stepwise growth of the market share for sodium-ion technology in India.

What are the challenges faced by a sodium ion battery manufacturer?

Volume production and accessibility: Companies need to scale up production and ensure accessibility for OEMs to integrate sodium-ion batteries into their products. Overcoming technological barriers: Challenges related to hard carbon anodes, expansion issues, and other manufacturing complexities must be resolved.
