

The development history of new energy lithium batteries

Why was lithium ion battery invented?

Instead of using reactive lithium metal as anode, he tried using a carbonaceous material, petroleum coke, which led to a revolutionary finding: not only was the new battery significantly safer without lithium metal, the battery performance was more stable, thus producing the first prototype of the lithium-ion battery.

When was the first lithium ion battery made?

While Sony was clearly the first to manufacture and sell lithium ion batteries, a number of previous studies were prelude to the 1991 product.

Why do we need a lithium battery?

Currently, the main drivers for developing Li-ion batteries for efficient energy applications include energy density, cost, calendar life, and safety. The high energy/capacity anodes and cathodes needed for these applications are hindered by challenges like: (1) aging and degradation; (2) improved safety; (3) material costs, and (4) recyclability.

When were rechargeable lithium batteries invented?

By exploiting this type of cathode materials, the first commercial rechargeable lithium batteries appeared in the late 1970s to early 1980s, one manufactured by the Exxon Company in the USA with a TiS_2 cathode and one by at that time Moli Energy in Canada with a MoS_2 cathode, both using liquid organic electrolytes.

Why did lithium batteries become popular in the 1970s?

Another key driving force for lithium battery development in the 1970s was the diffusion of consumer electronics that brought into the market a series of popular devices such as electronic watches, toys, and cameras. These devices required batteries capable of providing a good powering operation with a small volume size and a contained price.
