How is electricity generated using solar?

Solar power works by converting energy from the sun into power. There are two forms of energy generated from the sun for our use - electricity and heat. Solar is an important part of NESO's ambition to run the grid carbon zero by 2025.

How does solar power work?

Solar power works by converting energy from the sun into power. There are two forms of energy generated from the sun for our use - electricity and heat. Solar is an important part of NESO's ambition to run the grid carbon zero by 2025. But how does solar power work, how much does the UK produce and what happens to solar on a cloudy day?

What is solar energy used for?

Solar energy is used to generate electricity and to produce hot water. Solar energy is energy released by Solar cells are devices that convert light energy directly into electrical energy. You may have seen small solar cells in calculators.

What is solar energy?

Solar energy is a renewable and sustainable form of power derived from the radiant energy of the sun. This energy is harnessed through various technologies, primarily through photovoltaic cells and solar thermal systems.

Where does solar energy come from?

Solar energy is derived from the sun, which emits an enormous amount of energy continuously. This energy travels through space and reaches the Earth, where it can be harnessed for various uses. Most commonly, solar energy is captured and converted into electricity using solar cells.

Why is electricity a convenient source of energy?

Electricity is a convenient source of energy and can be generated in a number of different ways using either fossil fuels or renewable and sustainable technologies. Solar energy is used to generate electricity and to produce hot water. Solar energy is energy released by
