

What is a custom solar panel design tool?

Because it can be difficult to explain all these options over the phone, in an email, or on a webpage, we developed a Custom Solar Panel Design Tool. Customers can use this tool to learn the basic anatomy of a solar panel, some of the customization options available, and create a custom solution that meets their needs.

What materials can be used to make solar panels?

The solar panels can be combined with several backing materials, including fabric, metal, and fiberglass. PowerFilm's amorphous silicon solar technology is highly flexible, durable, lightweight, and has excellent indoor and low light performance.

Are solar panels a sustainable solution for trucking?

Solar power is emerging as a transformative solution, offering a sustainable way to address these challenges across various systems within a truck. This blog overviews five key areas where solar panels make a tangible impact--offering savings, reliability, and efficiency. Reliability is critical in trucking, and dead batteries halt operations.

How thick is PowerFilm solar panels?

The substrate is as thin as 1mil (0.025mm) thick. Amorphous silicon is the absorber layer in the solar panels. The amount of silicon used in PowerFilm solar panels is as low as 1 percent of the amount used in traditional solar panels. PowerFilm has a strong environmental profile and is cadmium free.

Why do you need ultra-light PV modules?

When weight, efficiency, and integration matter most, we develop ultra-light modules for the toughest conditions. Tailored to wings, fuselages, or bodies, these modules generate energy for your aerospace mission. Create more range and energy on board with vehicle-integrated or attached PV modules.

How big is a solar panel?

The solar material is 13 inches wide and up to 2,400 feet long. Flexible yet durable polyimide substrate enhances flexibility, paper thinness, and lighter weight. The substrate is as thin as 1mil (0.025mm) thick. Amorphous silicon is the absorber layer in the solar panels.
