

Unplug the power supply and the battery will shut down

Why does my laptop shut down after unplugging the power cord?

The most obvious reason for a laptop shutting down immediately after unplugging the power cord is that the battery might have gone bad. However, that isn't always the case, especially with newer laptops. It should be noted that the battery usually degrades over some time, and the change is noticeable.

Why does my laptop turn off when I unplug it?

If your laptop turns off immediately when you unplug it from a power source, it means your battery is not working. Most likely, your battery has reached the end of its useful life and has stopped holding a charge. Sometimes, laptop batteries can stop working out of the blue.

Why does my laptop keep shutting down without removing the battery?

At times, when a system is forced to shut down without following the appropriate process (e.g., pulling out the battery), the laptop's Power Management settings get altered. We could fix it as follows: Press Win + R to open the Run window and type the command `powercfg.cpl`. Press Enter to open the Power Options window.

Why does my laptop shut off when unplugged?

If your laptop shuts off when unplugged, you can try this method. Step 1. Shut down your laptop entirely and make sure that you have backed up your work before you do. Step 2. Remove all connected peripheral devices from your laptop such as USB drive, Bluetooth, and so on. Step 3. Unplug the power cable from the laptop and remove its battery.

How do I fix a laptop that shuts down when unplugged?

Running the Power Troubleshooter is an easy way to fix software issues that make a laptop shut down when unplugged. This tool looks for wrong power settings, driver issues, and other power problems, then tries to fix them automatically. Press Windows + I to open Settings. Go to Update and Security. Under Find and fix other problems, find Power.

How do I troubleshoot my laptop if I unplug it?

You need to contact the computer's manufacturer support to troubleshoot as a hardware issue. Thanks for your feedback, it helps us improve the site. My laptop shuts down as soon as I unplug my charger. I tried the below method of troubleshooting: Unplug your Laptop and remove the battery. Press and hold the Power button for 30 seconds. Plug your laptop.

A power supply can hold enough charge to kill someone for a long time - days certainly. That's why you should never disassemble a power supply. I'm a little surprised with your claim, but I guess if the power supply will turn on without mains attached, and given the low power requirements of a lot of modern hardware, I believe it. -

Unplug the power supply and the battery will shut down

Please do make sure that the battery is well seated in the laptop. Remove the battery first for couple of seconds the unplug the AC adapter as well then press and hold the ...

In my case, the laptop will experience abnormal battery drain if I completely shutdown the laptop with 70% or less battery. 71% or higher, I can shutdown the laptop normally without risking complete battery drain on next boot. For clarity, ...

Essentially the power supply randomly stops charging the device, and to get it to charge again i have to unplug the power adapter from the wall, wait 5-10 seconds, and then reconnect everything. Some bullet points: Surface Pro 7 i5 256GB 8GB The power supply turns off and cannot be used again until I unplug it from the wall

What I mean is that the average ie RMS power draw of your PC is 350W, the actual peak power draw is much higher, because it has a switched mode power supply. A switched mode power supply only draws power for a % of the mains cycle (depending on the input voltage). This is how a PSU accommodates 100-240 VAC.

laptop shows battery charge is at 100%. when I unplug the ac power the laptop immediately shuts down even with new ifixit battery. ive tried several different ways to reset it. looking for more suggestions. - Lenovo ThinkPad X1 Yoga ... power supply: yes. updated: Tue Jul 23 12:32:35 2024 (0 seconds ago) battery. present: yes ...
